

The Data Security and AI Governance tool for MSPs

Monitor every prompt, catch every sensitive upload, and govern how AI connects to client systems with Oveka.

PromptGuard monitors AI conversations, **Databridge** provides AI data access, and **Radar** scans platforms for sensitive data.

- ✓ Works with every major AI provider
- ✓ Discover and restrict Shadow AI
- ✓ Automatic blocking and redactions
- ✓ Adaptable alerting and notifications
- ✓ Easy deployment - ready in minutes

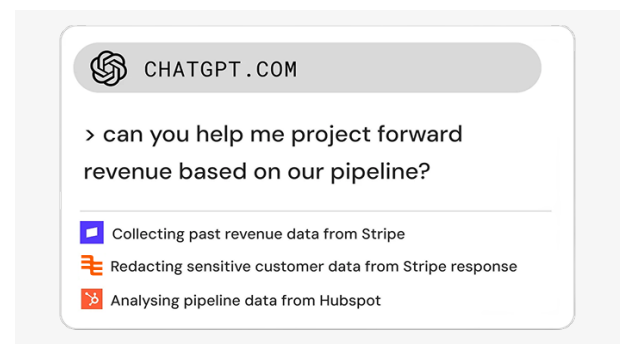

PROMPTGUARD

Find, monitor, and govern AI use

Discover AI tools, see prompts and conversations, and put lightweight guardrails around AI use. Block, allow, or require manual override for different data types and monitor AI use across the organization.

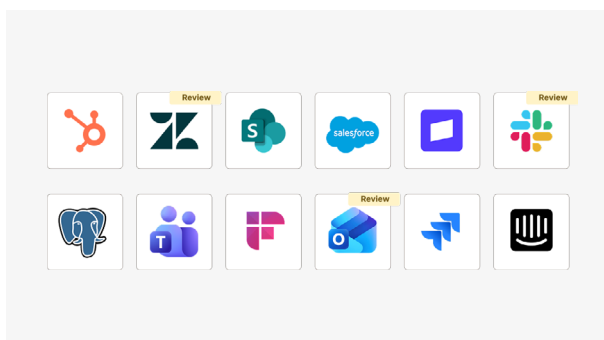

DATABRIDGE

Connect AI tools to the data they can use

Give AI tools governed access to company data across platforms. Databridge provides one-click integrations for common business platforms like cloud storage, CRMs, chats, support tools and more.

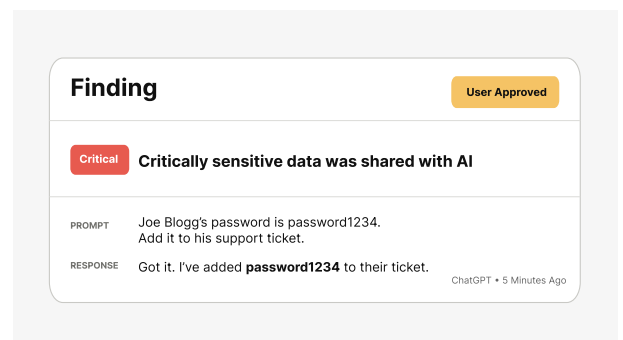

RADAR

Find sensitive data before it's a problem

See where data is stored across every platform. Scan platforms across the business for sensitive information and accidental data leaks and get alerts when sensitive data is somewhere it shouldn't be.

HOLISTIC

Safeguard sensitive data at multiple fronts

PromptGuard, Radar, and Databridge work together as part of Oveka's holistic approach to data governance for AI and SaaS and let your clients retake control of their sensitive data.
