

The Data Security and AI Governance tool for MSPs

Oveka's PromptGuard surfaces AI tools and monitors every conversation for sensitive data.

Ensure your clients are using AI safely by automatically blocking or alerting about sensitive data in prompts and uploads.

- ✓ Works with every major AI provider
- ✓ Discover and restrict Shadow AI
- ✓ Automatic blocking and redactions
- ✓ Adaptable alerting and notifications
- ✓ Easy deployment - ready in minutes

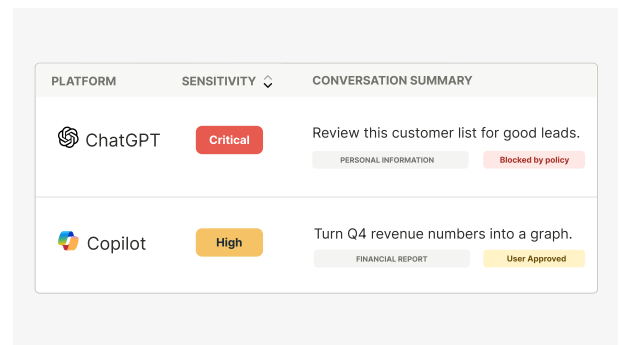

FIND

Discover AI tools being used

Discover AI tools used across teams. Oveka surfaces Shadow AI and lets you know which tools are being used, by which users, and what kinds of sensitive data are involved.

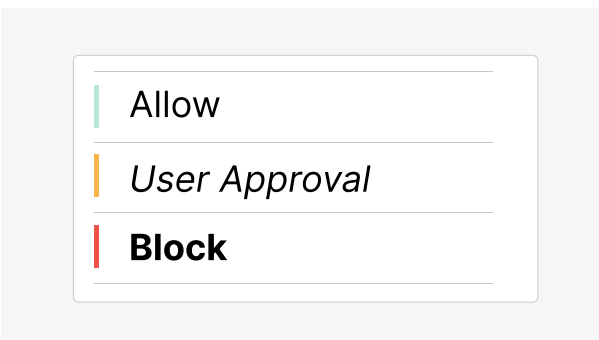

MONITOR

Review prompts and conversations

Set PromptGuard to simply surface tool usage or have it monitor every prompt, upload, and conversation with all AI tools with customizable actions for different users and involved data types.

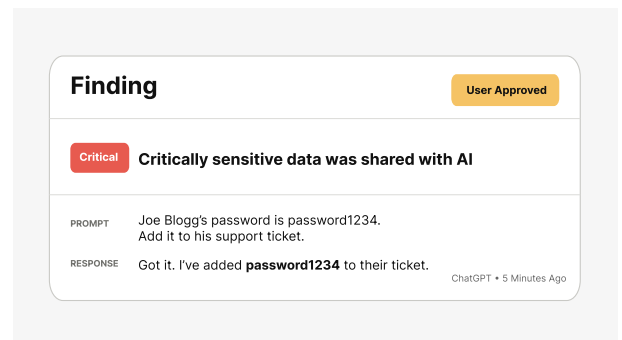

MANAGE

Put lightweight guardrails around AI use

Limit the types of data that can be used with specific AI tools or exclude certain tools from being used entirely. Allow, block, or require manual approval when specific data types are detected.

EVALUATE

Intelligent and adaptable alerting

PromptGuard limits alerts to what matters with intelligent notifications. Snooze or remove alert types to have Oveka adjust the notifications you receive to prevent alert fatigue.
