

The Data Security and AI Governance tool for MSPs

Radar can integrate with hundreds of SaaS products and scan data stores to find sensitive data where it shouldn't be.

Once found, it provides you with all the information and tools you need to regain control with simple, easy-to-use actions.

- ✓ Works with dozens of platforms
- ✓ Detects hundreds of data types
- ✓ Automatic blocking and redactions
- ✓ Adaptable alerting and notifications
- ✓ Easy deployment - ready in minutes

DISCOVER

Find sensitive data before it's a problem

See where data is stored across every platform. Scan platforms across the business for sensitive information and accidental data leaks and get alerts when sensitive data is somewhere it shouldn't be.

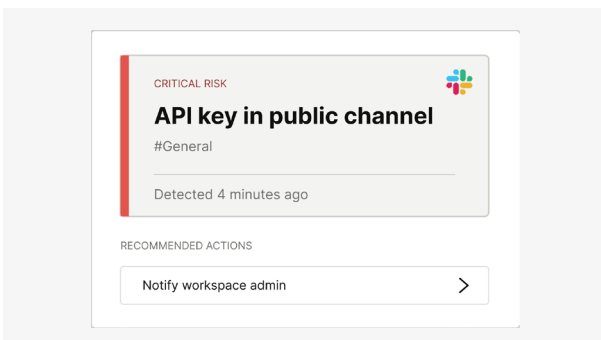

REVIEW

NAME	STATUS	PLATFORM	MONITORING
#General	12 Issues	Slack	Automatic Alerts
Standups	0 Issues	Fireflies	None
Accounting	2 Issues	SharePoint	Scanning Enabled

Easily see issues across platforms

See a high-level overview of alerts across all platforms that tells you at a glance the status of your connected platforms, last seen issues, and how Radar is functioning there.

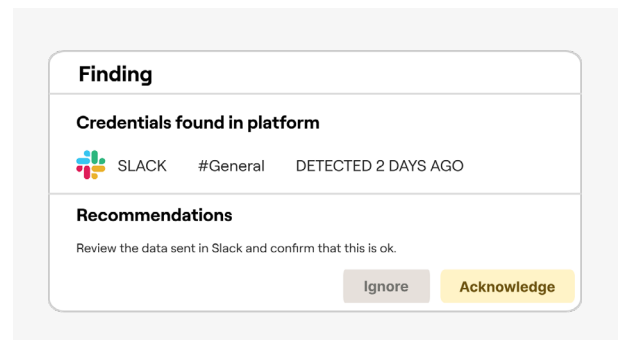

ACT

Actionable Insights

Radar doesn't just find data. It provides you with recommended actions based on the data type, you content settings, and platform involved.

CUSTOMIZE

Intelligent actions and alerts

Only get notified about what matters. Snooze or remove alert types to have Oveka learn what's important and adjust notifications accordingly.
